Using Text Notation - Moodle

To use these characters in an equation just place the ^ in front of them like x^2 or x_2. If you want to use the backslash, just use backslash. The only exception here seems to be the R, ampersand.

Superscripts, Subscripts and Roots

Superscripts are recorded using the **caret** symbol. An example for a Maths class might be:

$$x^2 \times x^3 = x^{2+3} = x^5$$

This is a shorthand way of saying:

$$(x \times x) \times (x \times x \times x) = (x \times x \times x \times x \times x)$$

or

$$x^2 \times x^3 = x^5$$

Subscripts are similar, but use the underscore character.

$$x_2 \times x_3$$

This is OK if you want superscripts or subscripts, but square roots are a little different. This uses a control sequence.

$$\sqrt{64} = 8$$
